The Basics

- ACTION CAMERA MOUNT
- MOUNTING SREW
- HELMET SPECIFIC BASE
- 3M VHB 4991 F adhesive
- 3M VHB surface cleaner included

Mounting instructions

Step 1: Find the right spot!

A wireframe diagram of the front of a car, focusing on the lower right corner near the headlight and bumper. A red outline highlights the correct mounting location on the front bumper, just below the headlight assembly. A small rectangular device with the text "ECHO" is shown mounted in this location.

Step 2: Clean mounting surface

Remember the right spot!

Step 3: Prepare for mounting!

Peel off the protective film from the 3M VHB adhesive. We recommend heating up the 3M VHB adhesive with a hair dryer for better mounting results.

Step 4: Placing the mount

Carefully line up the mount with your helmet (remember step 1). Don't press until you have the placement right. When you think the mount is on the right spot, press hard and hold for at least 1 minute with firm pressure.

Step 5: Waiting...

You mounted your Go Moto mount?!
Well done!

Just a little patience...

Before using your Go Moto Mount, we recommend not using it for 24 hours to let the adhesive cure properly.

We'd love to see your results! Share your Go Moto mount on Instagram or Facebook with @gomotomounts!

Questions?

Need any help mounting your Go Moto mount, or got any other questions? We'd be happy helping you out!

Mounting action camera

You can mount an action camera by using a compatible mounting buckle. This will be universal for different brands including GoPro Hero/Session, Insta360 ONE R, DJI Osmo Action, Xiaomi Yi 4K and more.

Push the buckle into place until it clicks.

Recommendation

You can mount an extension arm for better adjustability of the camera angle.

Removing the mount

Step 1: Weakening the adhesive

Removing the mount from your helmet can be pretty hard. Use the following instructions so you won't damage your helmet or the Go Moto Mount:

We advise heating up the sides with a hair dryer to make the process a little easier.

We also advise using something like an old credit card to remove the mount. Push the credit card between the mount and the adhesive (so you won't scratch your helmet).

Push the credit card between the corners of the VHB adhesive until it starts coming loose at each corner.

Step 2: Twisting

When the corners of the adhesive are released, try twisting the Go Moto mount (you can attach something to the mount to get more grip). By twisting the Go Moto Mount it should release from your helmet.

WARNING:

Only use the correct Go Moto mount for the intended helmet.

Always clean your helmet with original 3M VHB surface cleaner before mounting the Go Moto mount. The 3M VHB adhesive may not stick properly without using the 3M VHB cleaner.

Only use original 3M VHB 4991 F adhesive for the Go Moto Mount. Any other adhesives may fail to hold.

Always check your action camera is properly mounted before riding.

Go Moto is not responsible for any damage caused by improper installation.

DANGER. 3M VHB surface cleaner:

Contains: Propan-2-ol.

Highly flammable liquid and vapour. Causes serious eye irritation. May cause drowsiness or dizziness.

Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Avoid breathing vapours.

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
